

USFS working to stabilize Upper Truckee River

Damage from last winter has forced the Lake Tahoe Basin Management Unit to stabilize the Upper Truckee River project near Lake Tahoe Airport.

Work began in August on the airport side of the new river channel and will continue on the neighborhood side of the river starting Sept. 11. It should be finished by the end of the month.

Heavy equipment will be brought in to complete the work. This will impact neighborhood trails in the meadow and neighborhood access routes.
