

Personal info can easily be used against you

By G.W. Schulz and Daniel Zwerdling, Center for Investigative Reporting

For some, revelations that the National Security Agency has been collecting vast amounts of personal information on U.S. citizens might seem as far removed as the city of Moscow.

But it's not just an ultrasecret spy agency that can create a dossier on you.

Many Americans would be surprised by how easily local law enforcement, IRS investigators, the FBI and private attorneys can reach into the vast pool of personal information about their lives with little more than a subpoena, which no judge needs to review.

And it's not just for selling you more products or services. It can be wielded against you.

"We used to have to rely on private investigators," said Lee Rosen, a divorce attorney in North Carolina whose office averages dozens of subpoenas each month. "Now everything we need is more or less on the other side of the keyboard."

Often, a simple form is all that's required to access prescription histories, credit card purchases, monthly banking statements, ATM withdrawals, wire transfers, tax returns and, perhaps most importantly, the rich digital portraits we keep on our smartphones.

Law enforcement can create a map or timeline of a person's whereabouts by accessing data from license-plate scanners, toll-bridge crossings and mobile phone carriers and, without much trouble, access records on your power consumption,

purchasing habits and even snail mail.

The more we leave heaps of digital detritus behind, privacy advocates say, the more we may have to answer for it to someone with an ax to grind, an investigation to close or a client to represent.

“The digital world has suddenly given us a wealth of information like we never had before,” Rosen said. “The floodgates of data have opened up.”

To illustrate this, the Center for Investigative Reporting teamed up with NPR to craft a typical day in the life of personal information. Along the way, we’ll explain how it is amassed and how it can be vacuumed up.

First, consider your IP address, a unique identifier used to connect your phone or laptop to the Web. Perusing the Internet before you shower in the morning, you might not know that the government or a private lawyer can start with your IP address and determine your name. Or, starting with your name, the government can determine your IP address.

Although precision can be limited, private lawyers have used IP addresses to unmask alleged movie and music pirates.

Voltage Pictures, makers of “The Hurt Locker,” subpoenaed the IP address of a 69-year-old woman believing it linked her to Internet downloads that infringed on the movie’s copyright. She and numerous others targeted in the suit said they weren’t guilty of piracy accusations. The lawsuit eventually died.

Say, however, you’re streaming Internet radio as you move about the house, listening to a shock jock or political talk show host considered obnoxious by some. Smartphone apps like TuneIn and Pandora will store data on their servers on the talk shows and music you enjoy.

If you’re like millions of other Americans, you might use

dating sites like JDate.com or OkCupid.com to find romantic matches. Many users rely on pseudonyms until they're comfortable giving out more personal information to a potential date, but digital anonymity is often an illusion.

In 2011, Google acquired facial recognition software company PittPatt, which has been used by researchers to link dating profiles with full identities on other social media sites. Google already uses "computer vision technology" to power its image searches, Picasa photo platform and Google Goggles.

"Any attempt to set up a dating profile – even if you're using a pseudonym and even if you're not uploading photos you put in other places – can result in (someone being able) to find you," said Rainey Reitman, activism director at the Electronic Frontier Foundation.

OkCupid's privacy policy says personal information could be disclosed "in response to a subpoena or similar investigative demand, a court order, or a request for cooperation from a law enforcement or other government agency."

Little-known third-party advertisers and marketers can observe your dating activity, too. Software privacy specialist Ashkan Soltani offered a recent demonstration using a tool called Collusion, which visualizes the array of companies that monitor our activity online, watching as we click from one place to the next in order to better understand consumer behavior.

Collusion can be downloaded to your browser – Firefox, Chrome or Safari. Clicking on an icon while visiting a site will display an interconnected web of bubbles that represent companies collecting information about your activities. The companies have names like Lotame and Criteo. The tracking is largely invisible without an add-on like Collusion.

Soltani offers this metaphor: a phone call in which you dial OkCupid.

“In responding to my phone call or connection to OkCupid, (the site) brought all of its friends on to listen to my phone call,” Soltani said. “I’m on speakerphone at OkCupid, and all of these other people are also listening to my conversation.”

While many tracking companies insist they don’t need personally identifying information in order for the data to be useful, Soltani and others say trackers know enough about your behavior from pseudonymous “cookies” to profile you and make decisions about you online, such as how to target ads or special deals.

Reading the network traffic – the language that exists behind Internet activity – Soltani showed how answers to sensitive profile questions on OkCupid’s site covering drug use, religious beliefs and more were transmitted to the data tracking company Lotame, along with the user’s IP address.

When you log in with a username and password to sites like Gmail, Amazon or OkCupid, your behavior can be linked to your real name or email address. Soltani said personally identifying information also can unintentionally “leak” to third parties, even if companies say they have no need for such data, and it’s not clear what happens to the information once it falls into their hands.

Stanford University’s Center for Internet and Society showed in a 2012 paper how usernames or IDs leaked to third parties on 113 popular websites out of 185 tested.

Jonathan Mayer, a graduate student at Stanford who worked on the study, offered another demonstration. He first logged in to the video-sharing site Dailymotion with the username “jonathanmayer” and showed how a unique ID number assigned to him by the data tracker Criteo followed him to another site about sexually transmitted diseases.

Even a generic name like “stanfordguy” used to log in on multiple sites could be used to determine one’s real identity

and theoretically be exploited by law enforcement, Soltani and Mayer said.

Officials with OkCupid declined an interview, and Lotame did not respond to phone calls and emails.

Alexandra Pelissero, a spokeswoman for Criteo, said the company wouldn't know that "jonathanmayer" or "stanfordguy" correspond to the same technology researcher at Stanford. She also said Criteo does not store IP addresses.

"Criteo's cookie-based technology recognizes events, i.e., products viewed, and does not create individual user profiles based on them," Pelissero wrote. "It assigns Criteo IDs, which are based on a user's interests, i.e., online browsing behavior, and (doesn't) allow us to identify the individual user, so that we can serve more personalized ads that correspond to those interests."

Jules Polonetsky, executive director of the Future of Privacy Forum, said many such companies have good intentions and wish only to better-tailor advertising for products consumers want.

The forum bills itself as a "think tank that seeks to advance responsible data practices" and is supported by Amazon, Facebook, Netflix, Bank of America and a host of other major companies.

"I think companies haven't figured out how to talk to people about data or privacy," Polonetsky said. " ... There's nothing to be ashamed of if what they're doing is fair and honest."

Accessing personal information

Logs of seemingly innocuous everyday activities – like your power usage – can be obtained and used against you.

There are typically three ways the government and civil attorneys can try to access personal information. A search warrant is the toughest standard and requires the government

to convince a judge there's probable cause of a crime. Next is a court order, and the easiest to obtain is a subpoena.

"A subpoena, unlike a warrant, doesn't come from a court," said Kevin Bankston, senior counsel at the Center for Democracy & Technology, a nonprofit organization that advocates for Internet freedoms. "No one has to go to court. No one has to make a showing to a judge. A subpoena in the criminal context is issued directly by a prosecutor."

Bankston said all investigators must do for a subpoena is state that the information is relevant to an ongoing investigation.

Law enforcement agencies often argue all they need is a subpoena. Drug agents issued a subpoena in 2010 demanding that the Golden Valley Electric Association turn over the power consumption records, customer names, telephone numbers and credit card numbers for three addresses. For drug investigators, big power surges in a private house could mean the resident is cultivating marijuana with grow lights.

But the Alaska energy cooperative balked at the subpoena, citing its customer privacy policy. A federal court decision overruled the company's position and directed it to give up the records.

"It's kind of like looking at you through an open window and seeing what you do in your home," said Cory Borgeson, president of the company. Borgeson said that if the government wants your power records, it should have to show probable cause of a crime and get a search warrant.

When you head to work, your data portrait will continue expanding. Surveillance cameras in subway stations and on city buses watch you board and depart.

Chicago police for the first time successfully nabbed a suspect in May using facial recognition software known as

NeoFace that connected a surveillance image of the man from the city's train system to a massive database of booking photos.

To automatically identify celebrities and regular customers when they enter a store, some retailers reportedly are using another facial recognition technology originally developed in the U.K. for spotting terrorists and criminals.

Meanwhile, smart cards log when and where you travel using public transportation.

Police departments in the Bay Area and elsewhere around the country have used license-plate scanners to identify stolen cars and outstanding warrants. But the devices are designed to photograph vehicles and record the location, date and time of everyone who passes by without discriminating between criminals and innocent people.

The American Civil Liberties Union recently found that departments have widely ranging guidelines for how long they'll store this data, from 48 hours to five years to indefinitely.

Toll records remember when you crossed a bridge or used a particular interstate, and divorce attorneys are fond of them for that reason.

E-ZPass records, for example, will tell divorce attorney Jacalyn Barnett when someone has driven from the island of Manhattan, and paying cash makes her more suspicious that a spouse has something to hide. Another sign is odd departures from routine.

"People are very, very ritualistic," Barnett said. "Most people go to the same bank (branch) to do their transactions. If all of a sudden they're going to a different area, that tells you something."

Gray area around technology

One of the most powerful sources of information is your mobile device, which creates a rough approximation of your whereabouts by checking in with nearby cell towers or a more precise pinpoint when the GPS function is enabled.

The government doesn't believe it needs a warrant for historical tracking with a mobile device. Instead, investigators have said the law requires only a court order, which is slightly more demanding than a subpoena but still less protection than the Constitution affords under a warrant.

Judges so far have handed down a patchwork of rulings on locational privacy, and the issue is far from resolved. In a Baltimore case that has civil liberties groups worried, police were able to obtain more than seven months' worth of location data without a warrant from two cellphones belonging to robbery suspects. Most people would applaud catching robbers, but the advocacy groups argue that such prolonged tracking violates a reasonable expectation of privacy.

By the time you reach work, a mound of unopened emails awaits. Those, too, are part of a fierce debate over what requires a warrant. As its name suggests, the Electronic Communications Privacy Act of 1986 was designed to protect Americans who at the time were using the Internet increasingly to communicate. But the government has interpreted the law to mean that once your emails are opened or older than 180 days, no warrant is required.

Even if an investigator faces some hurdles with your inbox, such as Google insisting on a warrant, email is not entirely protected. With a court order that doesn't reach probable cause, Google will give up your name, IP address, the dates and times you're signing in and out, and with whom you're exchanging emails.

Google said in a statement: "We are committed to keeping

people's information safe and helping them control their personal data. Google Dashboard shows what's stored in your Google Account. From one central location, you can easily view and update your settings for services such as Blogger, Calendar, Docs, Gmail, Google+ and more."

Email nevertheless is at the center of a long-simmering legal dispute between environmentalists and Chevron over drilling in Ecuador. A federal judge this year granted Chevron's subpoena seeking metadata from Microsoft email accounts of activists, including names, dates and possible locations. The company also has requested access to accounts on Google and Yahoo.

Last year, Twitter fought a subpoena from prosecutors in New York who were seeking information about a user charged with disorderly conduct among hundreds arrested by police during Occupy Wall Street protests in 2011. A judge threatened Twitter with fines if it didn't give up the information, and the company handed over the data.

Digging into medical records

While many Americans are under the impression that their medical records are protected by privacy laws, investigators and private attorneys enjoy special access there, too.

The USA Patriot Act, passed shortly after the Sept. 11, 2001, hijackings, prohibits medical professionals from telling you if the FBI seeks your medical records as part of a national security or intelligence-related probe.

In some states like North Carolina, attorneys are considered officers of the court and issue subpoenas on their own as long as the information is connected to an ongoing dispute.

Divorce attorney Rosen tells the story of one client in a child custody case. The woman suspected that the father had mental health problems, so a subpoena was issued directing his psychiatrist to turn over notes about the man's treatment,

relationship with his child and prescription medications.

“Medical records are very private and need to be protected, but there’s a balance,” Rosen said. “Sometimes, your medical records need to be made public in order to do what’s best for a child.”

Credit card purchases are similarly illuminating. Rosen calls them a “table of contents” for your life. Your financial records enjoy some amount of protection that requires the government to notify you when it seeks information about your purchasing habits.

That is, unless the FBI uses a so-called national security letter – which the Congressional Research Service calls “roughly comparable to administrative subpoenas” – to demand details about your financial transactions. Then the bank is barred from notifying you.

The FBI’s authority to issue such letters was expanded by the Patriot Act, and the letters’ use has exploded to the tens of thousands each year, targeting telephone billing records, bank transactions, credit reports, names of employers and more.

Perspective on privacy

Many Americans still might ask why they should care, following the recent news of NSA snooping. After all, asks Paul Rosenzweig, a former deputy assistant secretary at the Department of Homeland Security, why would we fear giving personal information to the government if we’re willing to give police the power to kill and arrest?

“I tend to think that this is a manageable problem along the lines of cops with guns,” he said. “Anybody who denies the U.S. government has made mistakes in the past is a moron. My own sense, however, is that our system is wonderfully self-correcting.”

Former President Richard Nixon and former FBI Director J. Edgar Hoover were known for their widely documented eavesdropping abuses. But even Nixon became angry when his daughters' privacy was violated, according to John Dean, a lawyer for the former president.

"If Richard Nixon were alive today, I'd have a lot of concern about the data that's being collected, because I don't think Nixon would have any reservations about going into anything that was available to pursue his enemies," Dean said.

One such "enemy" of Nixon was Morton Halperin, a senior policy official in the administrations of Nixon, Bill Clinton and Lyndon B. Johnson. Halperin eventually fell out of favor with the Nixon White House, so much so that his phone was bugged for two years.

During a recent interview, transcripts and summaries of the intercepted calls rested on a table in front of Halperin. But all these years later, he still was reluctant to read aloud from the personal communications.

"There were many conversations between me and my then-wife," Halperin said, "none of which I would have wanted to be made public and some of which would have been a little embarrassing."

State climate risk meeting in Truckee

A series of public meetings will be convened across the state to get input from Californians on how the state should prepare for climate risks.

The California Natural Resources Agency in coordination with other state agencies will be drafting the new Safeguarding California Plan, an update to the 2009 climate adaptation strategy, and is inviting public input on key issues and approaches that stakeholders feel should be addressed in the update.

The California Natural Resources Agency is planning to release a draft version of the Safeguarding California Plan for public review and comment by the end of 2013.

The closest meeting to Tahoe is Oct. 11, 10am-3pm, Town Hall-Council Chambers, 10183 Truckee Airport Road, Truckee.

Truckee creating complex for nonprofits

Truckee is well on its way to becoming the home to a community complex to house nonprofit groups, much like the Parasol Foundation in Incline Village.

The Contractors Association of Truckee Tahoe (CATT), which is spearheading the efforts, has secured a generous land donation

from the Joerger family, and a number of nonprofit tenants and partners have lined up to be part of the project.

Shared nonprofit business centers have been popping up across the nation in recent years, with organizations and communities realizing the benefits of working together under one roof with many shared resources.

This is the land that will be developed for Truckee nonprofits. Photo/Pat Lynch

CATT is hoping to bring such a center, now called the Truckee Community Building, to the corner of Highway 267 and Brockway Road.

By cohabiting and working together, groups are saving money on rent and sharing space and resources (technology, conference rooms, office supplies), allowing them to focus money and energy into achieving their goals. They also find they are able to work together, rather than against each other, boosting productivity, performance, and community camaraderie.

Work is ongoing to secure funding for the building. Partnering and supporting agencies include Sierra Senior Services, Tahoe Safe Alliance, Project MANA, Tahoe Food Hub, YoungLife, Family Resource Center of Truckee, Truckee Lutheran Presbyterian Church, Tahoe Truckee Community Foundation, Community Collaborative of Tahoe Truckee, and the Parasol Tahoe Community Foundation.

Retailers tightening return policies

By Cotten Timberlake, Bloomberg Businessweek

High-end retailers such as Bloomingdale's are always happy to sell a glitzy party or bridesmaid dress that can cost hundreds of dollars. The return of a pricey frock after it's been worn is a less jubilant event.

If a garment comes back obviously used – sweat-stained, for example – a retailer can refuse to refund it, but that conversation can be “awkward,” says Richard Mellor, vice president of loss prevention at the National Retail Federation. So some retailers simply look the other way.

Many merchants have long lived by the mantra that the customer is always right, adopting liberal return policies in hopes of winning the loyalty of free-spending shoppers. But with a recent increase in the wearing and subsequent return of expensive clothes – a practice merchants call wardrobing – many retailers are taking a stronger stand against the industry's \$8.8 billion-a-year return fraud problem.

Bloomingdale's, a unit of Macy's, in February started placing 3-inch black plastic tags in highly visible places, such as the front bottom hemline, on dresses costing more than \$150 as they are being purchased. The clothes can be tried on at home without disturbing the special tag. But once a customer snaps it off to wear in public, the garment can't be returned.

The department-store chain isn't alone in trying to outwit some unscrupulous customers. Electronics retailers have turned to hefty restocking fees to discourage short-term use of expensive electronics to watch events such as the Super Bowl. Some Victoria's Secret stores are compiling lists of serial returners. And high-end outdoor goods retailer REI recently announced it's ending its lifetime return policy after customers took advantage of its lenient rules.

Study: Exercise as good as drugs to fight heart disease

By Makiko Kitamura, Bloomberg

Physical activity may be as effective as drugs in treating heart disease and should be included as a comparison in the development of new medicines, according to a review published this month in the British Medical Journal.

No statistically detectable differences were evident between exercise and drug treatment for patients with coronary heart disease or prediabetes, and exercise was more effective among patients recovering from a stroke, according to a review of 16 meta-analyses that included 305 studies involving 339,274 participants. The review was conducted by researchers at Harvard University and Stanford University.

The analysis adds to evidence showing the benefit of non-medical approaches to disease through behavior and lifestyle changes. Given the cost of drug treatment, regulators should consider requiring pharmaceutical companies to include

exercise as a comparator in clinical trials of new medicines, according to authors Huseyin Naci of Harvard and John Ioannidis of Stanford.

“In cases where drug options provide only modest benefit, patients deserve to understand the relative impact that physical activity have on their condition,” Naci and Ioannidis said in the published paper. In the meantime, “exercise interventions should therefore be considered as a viable alternative to, or, alongside, drug therapy.”

Time to think about being ready for ski season

By Heather Hansman, Outdoor

According to pro skier and personal trainer Pip Hunt the best way to get in shape for ski season is to already be in shape.

“I believe in training and staying active year-round,” she says. “Trying to get back in shape after a considerable amount of time of sucks.”

Hunt, who spent six years competing on the Freeskiing World Tour, and is a trainer at Jackson Hole-based Wright Training – owned by Crystal Wright, another FWT mainstay – knows a lot about ski-specific training.

You need a baseline of strength and endurance but, now that snow is starting to fall, Hunt says you should start challenging yourself aerobically and building the big muscles that’ll get you down the hill.

Amnesty period in El Dorado to license dogs

In an effort to encourage dog owners in El Dorado County to have their dogs licensed or renew expired licenses, El Dorado County Animal Services is offering an amnesty period for late and never-licensed, spayed or neutered dogs through Nov. 30.

During the amnesty licensing period, the penalty fees for late, expired, and never-licensed spayed or neutered dogs will be waived by Animal Services.

During this same period, the one-year license fee for a spayed or neutered dog will be reduced from \$20 to \$10 in the county and Placerville, and from \$30 to \$15 for dogs that reside in South Lake Tahoe.

County and city laws require licensing for all dogs at four months of age, and the dog must be current on its rabies vaccination.

Licensing helps Animal Services officers reunite lost pets with their owners and indicates that the dog is currently vaccinated for rabies. In addition, if an animal is injured and needs emergency care, a current license provides the information Animal Services Officers need to communicate with the owner right away. Nationally, 94 percent of dogs that come to shelters do not have any form of identification.

Licenses can be purchased at the El Dorado County Animal Services business office located at 415 Placerville Drive,

Suite N, Placerville and at the Western Slope shelter located at 511 Placerville Drive in Placerville and at the South Tahoe shelter at 1120 Shakori Drive in Meyers. Many veterinarians in El Dorado County also sell licenses.

For more info, call (530) 573.7925 in South Lake Tahoe or (530) 621.5795 in Placerville.

Shoulder injuries to be discussed by Barton doc

Shoulder Injuries and Treatment Options is what Dr. Kyle Swanson will be talking about Oct. 23.

The free lecture is from 6-7pm at Kahle Community Center in Stateline.

Swanson will talk about arthroscopic treatment of rotator cuff tears and treatment options for shoulder arthritis.

For more info, call (530) 543.5537.

K's Kitchen: Enough cookies to share

By Kathryn Reed

When I can find multiple places to disperse homemade cookies, all the better for my waistline. After all, I've eaten my

share of dough so no need to have much of the end product in the house.

With my youngest niece starting her first year in college, it was time to bake her some cookies. I still remember how much I loved receiving care packages from my mom and older sisters. Cookies are what I tend to send.

Her first shipment had half chocolate chip – with white chocolate chips, and the other half was peanut butter crisscrosses.

Because I chose to bring something sweet to consecutive tennis matches Jacqueline benefited with getting variety in her box. Then Sue's work each got a plate, too. And there are a few packaged in the freezer for when I have a sweet tooth. It's also good to have some in the freezer because then I have a dessert for a last-minute situation.

To have enough cookies for everyone I made $1\frac{1}{2}$ batches.

I'm not sure where the recipe originated. My mom wrote the card.

Peanut Butter Crisscrosses

1 C shortening

1 C white sugar

1 C brown sugar

1 tsp vanilla

2 eggs

1 C peanut butter

3 C flour

2 tsp soda

Dash salt

Cream shortening, sugars and vanilla. Add eggs, beat well. Stir in peanut butter. Add dry ingredients.

Form into small ball. Place onto ungreased cookie sheet. Press with fork twice to make cross.

Bake 375 degrees for 10 minutes. Makes 8 dozen.

Tahoe Tails – Adoptable Pets in South Lake Tahoe

Glen

Glen looks a little like a mop – but under all that hair is a very nice, somewhat shy, fluffy Shih Tzu (best guess) mix.

He came into the shelter very matted, and was glad for a quick haircut. He will benefit from some professional grooming, and will be quite beautiful when his hair grows back in. Glen is a sweet little boy, about 18 months old, who will fit into just

about any household.

Glen is neutered, microchipped, and vaccinated. He is at the El Dorado County Animal Services shelter in Meyers, along with many other dogs and cats who are waiting for their new homes. Go online to see photos and descriptions of all pets at the shelter.

Call (530) 573.7925 for directions, hours, and other information on adopting a pet.

For spay-neuter assistance for South Tahoe residents, go online.

– Karen Kuentz
