28	29	30					29	30			

The 2013 Tahoe Pipe Club storm drain calendar is dedicated in part to Tahoe Keys urban storm drain pipes. The Upper Truckee marsh was once the largest wetland in the Sierra Nevada's, but is now home to the greatest concentration of urban storm drain pipes in the Lake Tahoe basin. Over 40 hydrologically connected urban pipes in the Tahoe Keys discharge toxic storm water into Lake Tahoe every time it rains or snows. The first half of this 2013 calendar are photographs of some of these Tahoe Keys pipes. The second half of this 2013 calendar present priority outfall pipes from the rest of the Lake Tahoe basin. These pipes are from the north shore to the south shore, and from the east shore to the west, and the only solution to pollution from these pipes is infiltration bmp's to eliminate the pollution before it reaches Lake Tahoe.

Tahoe Keys—January through June

South Shore— November and December

To watch the 2013 video calendar showing each of these pipes polluting Tahoe, visit:

East Shore—September

North Shore—August
